# ROCK XHD EXCAVATOR BUCKETS

PRODUCTS

Rock XHD excavator buckets are excellent tools made of high quality materials for working in hard to break materials in workability class 5 and above. Buckets in the XHD version are designed for demanding work with rocks such as granite, slate, basalt, sandstone, etc. The Hardox In My Body™ certificate guarantees the originality of the excellent abrasionresistant and extremely strong materials used in their production.

**ROCK XHD  
EXCAVATOR BUCKETS**

**MAIN  
FEATURES  
AND BENEFITS**

Sturdy suspension construction provides high strength and resistance against torsion at the critical points where parts connect.

Deep shape for larger volume combined with a smaller distance between pin and teeth for the best transfer of digging force.

The bucket body made of abrasion-resistant materials and reinforced sides made from a single piece give the bucket design structural integrity.

The ESCO Ultralok™ teeth system provides optimum digging performance.

- + Can be supplied with other wear-resistant elements (easy-to-replace protective covers for edges and sides can be installed for larger sizes).

Thick abrasion-resistant armoring on bottom and lower part of sides, side cutting edge for improved penetration.
