STANDARD ST EXCAVATOR BUCKETS

PRODUCTS

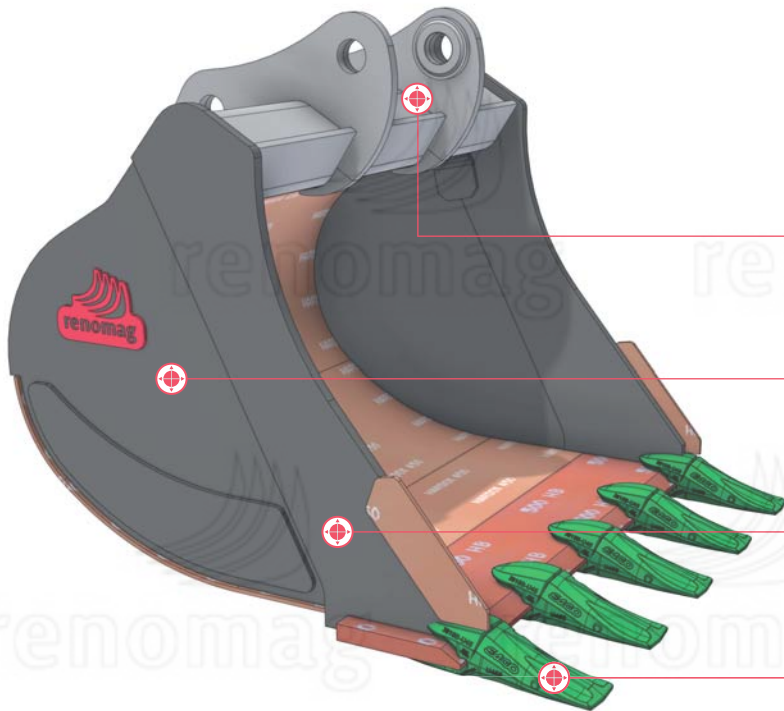

This line of excavator buckets is designed for general use in conditions that are not difficult. It can be used particularly when working with easily breakable and less abrasive materials in workability classes 1 to 4 (arable soil, earth, sand, clay, weathered soft limestone and marl). The bucket shape is optimized for easy penetration into material.

**STANDARD ST
EXCAVATOR BUCKETS**

**MAIN
FEATURES
AND BENEFITS**

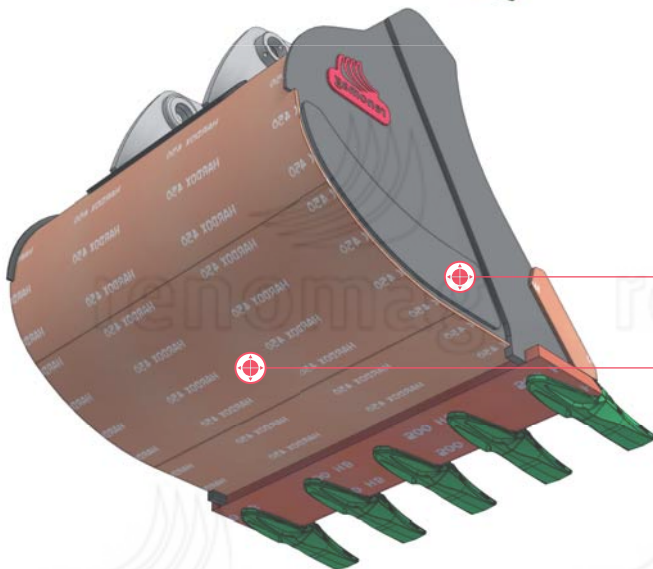

Sturdy suspension construction for high strength and resistance against torsion at the critical points where parts connect.

Deep shape for larger volume combined with a smaller distance between pin and teeth for the best transfer of digging force.

The strong body and sides made from a single piece give the bucket design structural integrity.

The ESCO Ultralok™ teeth system provides optimum digging performance.

Armouring on lower part of sides.

Bottom made of abrasion resistant steel with 3 times longer service life with lower weight.
